

COVER LETTER

Sameep Sehgal is a Software Engineer with **1.5+ years of professional experience in backend development** at Veersa Technologies. He holds a **B.Tech in Computer Engineering from YMCA** and specializes in designing **scalable, high-performance backend systems** with a strong focus on **clean architecture, performance optimization, and reliability**.

He has contributed to enterprise products across the **Healthcare, FinTech, and Cyber Fraud** domains, building secure, scalable backend solutions for mission-critical business workflows and high-volume transaction processing.

His technical expertise includes **Java, C/C++, Spring Boot, RESTful API development, PostgreSQL, MySQL, Flyway, Redis, Kafka, AWS (EC2, ECS, SQS, S3, SES, VPC, IAM, Cognito, XRay, Grafana, etc), Docker, Postman, Swagger and Git**. He has experience working with **multi-tenant architectures, distributed systems, cron-based job scheduling with ShedLock, SQL query optimization, caching strategies, and validation frameworks**. Additionally, he has hands-on exposure to **Generative AI and Retrieval-Augmented Generation (RAG) systems**, integrating AI-driven capabilities into backend workflows.

With a strong foundation in **data structures, system design, and scalable backend engineering**, Sameep approaches problem-solving with a **product mindset**, prioritizing performance, maintainability, and business impact. He is eager to contribute to engineering-driven teams building **robust, scalable, and high-impact software products**.
